

AI Compliance Deadlines & Required Documents - 2026

Five frameworks. Three upcoming deadlines. One reference guide.

A concise reference for compliance consultants, legal teams, and operators working across the EU AI Act, Colorado SB 24-205, CPRA ADMT, NYC Local Law 144, and Illinois AI employment laws.

Deadline snapshot

Framework	Status / Date	Practical takeaway
Colorado SB 24-205	June 30, 2026	High-risk AI developers and deployers making consequential decisions about Colorado residents need documentation, risk management, and impact assessment readiness.
EU AI Act Annex III	August 2, 2026	High-risk AI providers, and certain deployers, need Annex IV technical documentation and core high-risk compliance controls.
CPRA ADMT	January 1, 2027	ADMT-specific notice, opt-out, and access obligations begin then; separate risk assessment timelines may also apply.
NYC Local Law 144	Already enforced	Covered AEDTs used for hiring or promotion in New York City require an annual bias audit and required notices.
Illinois AIVIA + HB 3773	Already enforced / 2026	Video interview consent duties are already active; broader employment-decision AI notice duties take effect January 1, 2026.

Use this guide to identify which regimes are most likely to apply, what documentation artifacts recur across them, and which deadlines are already active. It is a planning reference, not legal advice.

Framework details

EU AI Act

Region: European Union

Status: Likely in scope when Annex III high-risk categories apply

Enforcement / timing: 2 August 2026

Annex III high-risk systems trigger documentation and core governance obligations. Provider and deployer roles differ, but high-risk systems require structured evidence and controls.

- Technical documentation per Annex IV / Article 11
- Risk management system — Article 9
- Data governance measures — Article 10
- Transparency and user information — Article 13
- Human oversight measures — Article 14
- EU database registration — Article 49 (EU database in Article 71)

Practical takeaway: if your system supports hiring, education, access to services, law enforcement, migration, or other Annex III uses, you likely need a formal documentation package rather than ad hoc notes.

Colorado SB 24-205

Region: Colorado, USA

Status: Likely in scope for high-risk AI systems used in consequential decisions

Enforcement / timing: June 30, 2026

Colorado applies to certain developers and deployers of high-risk AI systems that make, or substantially influence, consequential decisions about Colorado residents.

- Disclose foreseeable uses, known limitations, and relevant system information to deployers
- Provide documentation needed for deployer impact assessments
- Make a public statement about high-risk AI use
- Report discovered algorithmic discrimination to the Colorado Attorney General
- Implement a risk management program
- Complete an impact assessment
- Notify consumers before consequential decisions
- Allow consumer correction and appeal
- Review deployed high-risk AI systems at least annually

Small deployer exemptions may apply in limited cases, but only if statutory conditions are met. The safer planning assumption is to prepare the full documentation set unless counsel confirms an exemption.

NYC Local Law 144

Region: New York City, USA

Status: In scope when an AEDT is used to screen candidates for employment or employees for promotion in NYC

Enforcement / timing: Enforced since July 5, 2023

Local Law 144 regulates certain automated employment decision tools. Covered use is unlawful without a valid annual bias audit and required notice/disclosure steps.

- Annual independent bias audit
- Public posting of bias audit summary
- Candidate / employee notice at least 10 business days before use
- Data type, source, and retention-policy disclosure on written request

This law is already live. If you use AI-supported hiring or promotion tooling touching New York City, treat compliance as an operational requirement now, not a future project.

CPRA ADMT

Region: California, USA

Status: Likely in scope when your business is subject to the CCPA and uses ADMT for significant decisions

Enforcement / timing: ADMT obligations: January 1, 2027; separate risk assessment timing may apply earlier

California's CPRA regulations create specific obligations for automated decisionmaking technology in significant decision contexts. Human involvement can change the analysis, but only if it meets the regulatory standard.

- Pre-use consumer notice
- Opt-out mechanism
- Consumer access rights
- Risk assessment requirements may apply on a separate timeline
- CPPA submission deadlines are phased beginning April 1, 2028

The key nuance: ADMT-specific compliance timing and risk assessment timing are not identical. Do not collapse them into a single date in your planning documents.

Illinois AI Employment Laws

Region: Illinois, USA

Status: In scope for certain video interview AI uses and broader employment-decision AI use cases

Enforcement / timing: AIVIA in effect since January 1, 2020; HB 3773 effective January 1, 2026

Illinois combines targeted video-interview AI rules with newer employment-decision AI notice and anti-discrimination rules.

- AIVIA: obtain candidate consent before using AI to analyze video interviews
- AIVIA: disclose AI use and delete requested videos within 30 days
- HB 3773: notify employees and job applicants when AI is used in employment decisions
- Demographic reporting may be required in limited cases involving sole reliance on AI analysis of video interviews

Illinois obligations vary by use case. Video interview analysis and general employment-decision AI are related but not identical compliance buckets.

Cross-framework planning insight

Across all five frameworks, the recurring operational pattern is the same: define the use case, document the system and its limits, preserve evidence, establish review or oversight steps, and maintain a defensible record of what was assessed and why.

Berly is designed to help teams organize those materials into a reusable documentation workflow across frameworks, rather than rebuilding the same evidence package from scratch every time.
